14:15 | Open discussion on safety, concrete and quality based on above presentations and seminar's outcome along with wishes and content suggestions for future seminars · All seminar participants

14:45 - 15:00 Closure of the seminar and ending

IPHA wishes you an interesting seminar

Two big advantages of the IPHA Conference are that delegates can learn so much from a visit to the host company's factories and that they have quality time to network on new ideas and past experiences. This year, Generale Prefabbricati did not disappoint. Delegates had the opportunity to visit, not only a hollowcore factory, but also the associated precast factory of Edilbeton Perugia, producing glass reinforced cement cladding panels. Some overseas visitors enjoyed seeing the production of deep hollowcore slabs for the first time. There was general agreement amongst the delegates that the visits were most informative.
